

SPECTRA OFFERS STERILE NEEDLES

Spectra offers packaged sterile needles (and other medical devices) in a series of Tyvek™ chevron peel pouches. The manufacturing of all Spectra needles is overseen by a knowledgeable, experienced Quality Control Department. Every needle is put through a validated packaging and sterilization process. Spectra's packaging facility has a class 100,000 cleanroom and our state-of-the-art sterilization facility has ISO 13485 certification.

Spectra will provide appropriate studies establishing SAL, bioburden, non-pyrogenicity, nontoxicity, package integrity and EtO residuals, as well as bacteriostasis and fungistasis for all standard products. Spectra will also work with customers for custom needle requirements to address testing and validation needs for their specific product requirements.

Spectra's new dedicated packaging facility with fully validated packaging processes is available for our current contract packaged sterile needles, and for customers looking for contracted packaging solutions to market their products as quickly and easily as possible. We have an array of packaging options to meet our customer's needs; private labeling of products, and EtO sterilization.

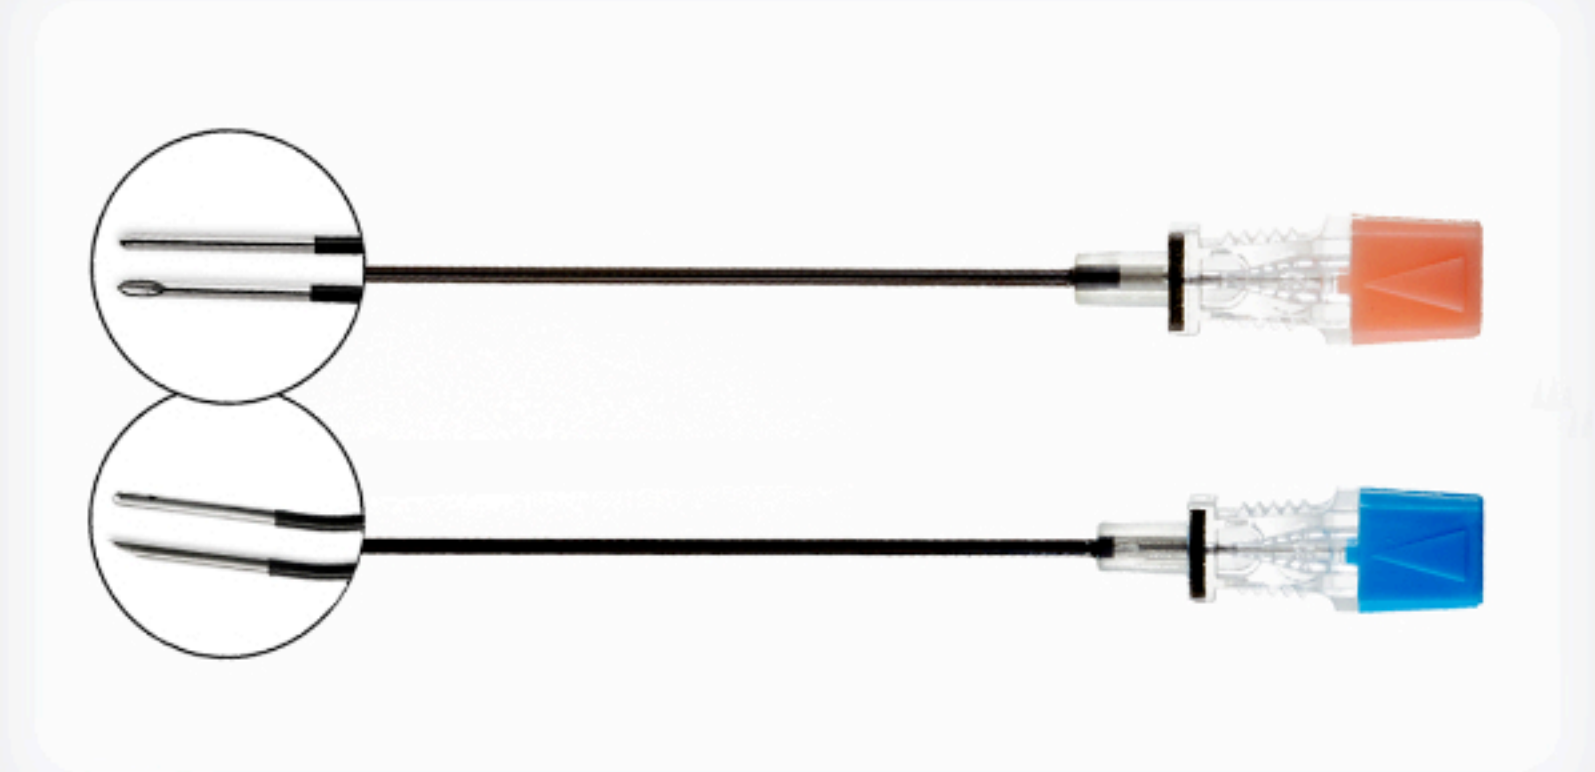

Our most popular sterile needles are the **peripheral nerve block (PNB)** - single-shot needle for musculoskeletal (MSK) injections and **radiofrequency needles**, which can be used with probes and generators.

PNB - SINGLE SHOT

Features and Options Available:

- 510(k) clearance
- ISO 80369-6 (NRFit®) compliant hubs
- Echogenic or non-echogenic
- B bevel
